

VOLGA-70

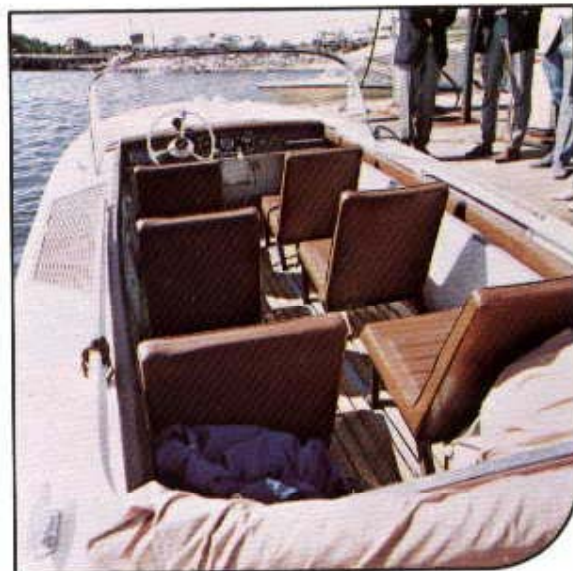

sea-going hydrofoil pleasure boat

One of the fastest boats in her class, the comfortable hydrofoil motor boat "Volga-70" is designed for pleasure trips, tourism and service business purposes. It also can be used in coastal shipping up to two miles off-shore and up to twenty miles from port of refuge, as well as on rivers, lakes and man-made reservoirs.

A unique hull design with foils made of aluminum-magnesium alloy and stainless steel gives the "Volga-70" a speed of up to 30 knots.

A three-compartment structure makes the vessel unsinkable—should any one compartment be flooded, it remains afloat.

Each ride is a joy—with the easy steering, broad excellent view and eye-appealing finish of the cockpit and six easy chairs.

The power plant of "Volga-70" includes the engine and the steering-outboard drive "Volvo-Penta" AQD32A/27OD (Sweden). The plant needs a minimal amount of diesel fuel to develop required power.

"Volga-70" comes with an ample set of spare tools and accessories for years of trouble-free performance.

VOLGA-70 SPECIFICATIONS

Length overall, m	8.55
Breadth, m	2.10
Full displacement, kg	1930
Light displacement, kg	1350
Draft afloat, m	0.92
Draft foilborne, m	0.52
Passenger capacity	6
Engine type	"Volvo-Penta" AQD32A/27OD diesel
Output at 3800 rpm, hp, SEA	102
Ultimate output at 4000 rpm, hp, SEA	106
Service speed, knots	28
Top speed, knots	30
Fuel capacity, l	120
Endurance, miles	150

Smooth sailing!
